

Case Description: Co-Creation in Skibet to Promote Biodiversity

In Skibet, we are embarking on an exciting journey towards enhancing biodiversity through the Co-Bio project, where the local council and Vejle Municipality have formed a unique climate partnership. We invite the entire local community – associations, businesses, and residents – to actively participate in developing a greener Skibet. Through co-creation, we will create wild natural areas by sharing knowledge, identifying areas, and securing funding for specific projects.

This initiative offers opportunities to transform grasslands into blooming meadows, establish recreational green spaces, and plant pocket forests that will create more green corridors within the community. Everyone can help shape the future and contribute to a sustainable Skibet, where together we can make a significant impact on nature – and on each other.
