

Case Description: Co-Creation Local case in Vienna

Öko Campus Wien (Eco Campus Vienna) is a young association working on biodiversity in urban areas since 2021 and safeguarding local species and habitats on the Campus of the University of Vienna and beyond.

The current work strand of the Austrian Case Study *Öko Campus Wien* is called *Biodiversify UBB* - and we are already meeting since November 2024 to actively transform the Campus UBB (New Biology Campus of the University of Vienna) at Djerassiplatz 1, 1030 Vienna. In our first meeting there have been 13 people participating, even though it was cold. We had a session of planting geophytes for pollinators and later did a participatory planning session indoor to collect ideas with the students and neighbors on how to transform the campus together. The first action day was like an official starting point for the project. *Öko Campus Wien* aims to involve new groups on their biodiversity measures and activities on the Campus of the University and in the 9th and 3rd district of Vienna and therefor develops a case study design along the guidelines of the EU project. By now potential measures are discussed and brought together with new ideas and partners of Co-Creation.
