

Case Description: Co-Creation in Palermo

The Best Practice led by CESIE will occur at Sperone Pertini_Plesso PPPuglisi School in Palermo.

It will involve the primary students and middle school ones too and they will be leading to create a proper garden inside the school. Also, teachers and students' parents will be involved in the activities that will be implemented during the Best Practice development.

Another part of the BP will involve the reclamation of a long-abandoned area near the school. The local community in terms of different stakeholders, will be involved in the implementation of this task too. We think that the main aims of the best practice will increase new habitats for various plant species, insects, birds, and other wildlife, the improvement in local environmental quality and community engagement with social benefits.
